

## Colorado Springs School District 11 Bond Construction Program Monthly “Snap-Shot” February, 2008

The **East Middle School / Math-Science Magnet** work has begun. The heating and ventilation system will be replaced, along with the potable water system. These photos show the demolition of the boilers and piping. Other work to be accomplished by August includes: Renovation of the Science classrooms; Gym floor and bleacher replacement; Athletic locker replacement; Electrical and Plumbing repairs. Our contractor is Cobb Mechanical.

**Palmer High School's Commons Addition** is nearing completion. Roof flashing, HVAC (this area is air-conditioned), and interior finishes will be completed in time for the Grand Opening, scheduled for Friday, March 7th. The new adjoining kitchen is already in operation and is already serving many more meals. Daniel-Barry Construction is on this one.

**Coronado High School's Auditorium** is coming along nicely. The structural steel is going up, and the new balcony is taking shape. Although we experienced some unusual challenges on this project, it is now going well and will be complete by August. Gerald Phipps Construction is building this project.
