

**Write your answers.**

1. How do rivers help people?
2. Why do some rivers flow more quickly than others?
3. How does a delta form? What does it look like?
4. Several things must happen for a river to form. Places these things in order: Runoff begins to trickle down the mountain; the young river grows with each added tributary; snow melts from the top of a mountain; several runoffs flow together to form a small stream, or rivulet.
