

# Locker Practice!

How to open a combination lock...

1. Clear your lock by turning to the **RIGHT** a couple times then stop at the 1st number.
2. Turn **LEFT** one full turn (passing the 1st number). Stop at the 2nd number.
3. Turn **RIGHT** a partial turn (don't pass the 2<sup>nd</sup> number). Stop at the 3rd number.

You can't jiggle and correct between the lines while you're moving from one number to the next. It has to be a clean stop between numbers. With practice, you'll have this in no time!

**THE COMBINATION IS USUALLY ON THE BACK OF A PURCHASED LOCK.** In the school, the locks are built into the locker and you memorize your combination.

**Please don't share your combination or your locker!**
