Ctrl + Alt + /

Switch quickly
between windows

Press and hold **Alt**, tap **Tab** until you get to the window you want to open, then release.

Take partial screenshot

Ctrl + Shift + 

Take screenshot

Ctrl + 

Turn Caps Lock on and off

Alt + Search

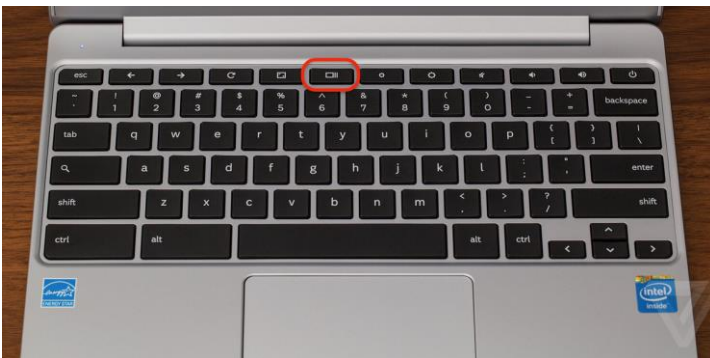

Display Zoom in

Ctrl + Shift + =

Display Zoom out

Ctrl + Shift + -

To take a screenshot of the entire screen, use the **Ctrl + Show windows** key combination. The Show windows key, which looks like a rectangle with two lines on the right side, is on the top row of the keyboard (it's the equivalent of the F5 key on a PC keyboard).

To take a screenshot of a portion of the screen, press the **Shift + Ctrl + Show windows** keys. You'll see a crosshair icon; click and drag it until the part of the screen you want to copy is highlighted, and then let go.

Any screenshot you take will end up in the Downloads folder. To find the folder:

- Select the Launcher at the left corner of your display.
- Look for the icon named "Files" under the search field. If you don't see it, select the up arrow and look for the "Files" app there.
- That icon will bring up your file manager. Look for your Downloads folder under the "My Files" category on the left. Your screenshots will be there.
